## Abstracts

CNC turning centers are also computer controlled but are more powerful and can have 3, 4 or 5-axes with more versatile capabilities and applications such as turning, drilling, tapping, and milling using live tools with powered rotary tool turret, sub-spindle (dual spindles), Y-axis, and multiple turrets. They are usually slant-bed type and have full machine enclosures to keep chips and coolant splashes within the machine. CNC turning centers have higher production capabilities than CNC lathes.

This report elaborates the market size, market characteristics, and market growth of the CNC Turning Centers industry, and breaks down according to the type, application, and consumption area of CNC Turning Centers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for CNC Turning Centers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
