Abstracts

Coal Bed Methane (Cbm) is a form of natural gas extracted from coal beds. It is called 'sweet gas' because of its lack of hydrogen sulfide. The presence of this gas is well known from its occurrence in underground coal mining, where it presents a serious safety risk. Coal bed methane is distinct from a typical sandstone or other conventional gas reservoir, as the methane is stored within the coal by a process called adsorption. This report elaborates the market size, market characteristics, and market growth of the Coal Bed Methane (Cbm) industry, and breaks down according to the type, application, and consumption area of Coal Bed Methane (Cbm). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Coal Bed Methane (Cbm) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
