## Abstracts

Coal is an essential fuel utilized globally to generate electricity, while petroleum fuels are commonly utilized in vehicles. Moreover, coal and petroleum fuels majorly possess carbon (carbon-carbon bond (C-C)) hydrocarbons), which makes the conversion of coal to liquid fuel more feasible. The production of liquid fuel from coal is also known as coal-to-liquid (CTL) technology or coal liquefaction, either by direct or indirect liquefaction. In this procedure, coal is dissolved in a solvent at high temperature and pressure, followed by hydrogenation to produce a high-grade, clean fuel suitable for use in transport. Moreover, the obtained liquid fuel tends to be ultra-clean, sulfur-free, low in particulates, causes low CO<sub>2</sub>, oxides, and nitrogen emissions through Carbon Capture and Storage (CCS).

This report elaborates the market size, market characteristics, and market growth of the Coal To Liquid Fuel industry, and breaks down according to the type, application, and consumption area of Coal To Liquid Fuel. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Coal To Liquid Fuel in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
