Abstracts

A coating is a covering that is applied to the surface of the object. The purpose of applying the coating could be functional, decorative or both. Surface coatings can be applied to glass to modify its appearance and give it many of the advanced characteristics and functions such as low maintenance, special reflection properties, scratch resistance, corrosion resistance, etc. Glass coatings consist of particles of silicon dioxide within the hard resin that acts as barrier to contamination and increase shine.
This report elaborates the market size, market characteristics, and market growth of the Coating Glass industry, and breaks down according to the type, application, and consumption area of Coating Glass. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
