## Abstracts

Cold-formed steel (CFS) is a kind of steel made by rolling or pressing steel into semi-finished or finished goods at relatively low temperatures (cold working). Cold-formed steel are created by the working of steel billet, bar, or sheet using stamping, rolling (including roll forming), or presses to deform it into a usable product. Cold-worked steel products, such as cold-rolled steel (CRS) bar stock and sheet, are commonly used in all areas of manufacturing of durable goods, such as appliances or automobiles, but cold-formed steel is most prevalently used for construction materials.

This report elaborates the market size, market characteristics, and market growth of the Cold-formed Steel (CFS) industry, and breaks down according to the type, application, and consumption area of Cold-formed Steel (CFS). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Cold-formed Steel (CFS) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
