Abstracts

Cold heading is the process of forming rivet heads, wood screw blanks, machine screw blanks and similar products by using different techniques such as upsetting, forward extrusion and backward extrusion, along the length of the wire during cooling. The device that implements this process is called a cold head, where wires are fed from the coil into the machine and cut and guided therein.

This report elaborates the market size, market characteristics, and market growth of the Cold Heading Machine industry, and breaks down according to the type, application, and consumption area of Cold Heading Machine. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
