## Abstracts

Collagen peptides are small bioactive peptides obtained by enzymatically hydrolysis of collagen, in other words, the breaking down of the molecular bonds between individual collagen strands to peptides. Hydrolysis reduces collagen protein fibrils of about 300 – 400kDa into smaller peptides with a molecular weight of lower than 5000Da. Collagen peptides are also known as hydrolyzed collagen or collagen hydrolysate.

This report elaborates the market size, market characteristics, and market growth of the Collagen Peptides industry, and breaks down according to the type, application, and consumption area of Collagen Peptides.
