Abstracts

Colloids are large molecular weight (nominally MW > 30,000) substances. In normal plasma, the plasma proteins are the major colloids present. Colloids are important in capillary fluid dynamics because they are the only constituents which are effective at exerting an osmotic force across the wall of the capillaries. Albumin solutions are available for use as colloids.

This report elaborates the market size, market characteristics, and market growth of the Colloids (Blood Plasma) industry, and breaks down according to the type, application, and consumption area of Colloids (Blood Plasma). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Colloids (Blood Plasma) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
