Abstracts

In commercial air travel, particularly in airliners, cabins may be divided into several parts. These can include travel class sections in medium and large aircraft, areas for flight attendants, the galley and storage for in-flight service. Seats are mostly arranged in rows and alleys. The higher the travel class, the more space is provided. Cabins of the different travel classes are often divided by curtains, sometimes called class dividers, but not on all airlines. Passengers are not usually allowed to visit higher travel class cabins in commercial flights. Business class is more expensive, but it also offers more amenities to travelers than the classes below it. These may include better food, wider entertainment options, more comfortable seats with more room to recline and more legroom, among others.

This report elaborates the market size, market characteristics, and market growth of the Commercial Aircraft Cabin Interior industry, and breaks down according to the type, application, and consumption area of Commercial Aircraft Cabin Interior. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
