Abstracts

Commercial vehicle prognostic systems are used to calculate the failure time for various systems and their components. Here, failure signifies the point at which a system can no longer be used to deliver the desired task or performance. Moreover, commercial vehicle prognostic has been a new area of development in telematics over the years. Commercial vehicle prognostic systems are capable of communicating the cause problem of any vehicle system and propagate upstream and downstream effects across a vehicle system. Automotive manufacturers, such as Volvo, provide an open platform that can be used to develop telematics solutions for different stakeholders. They have also offered some of the application interfaces from their solution, which can be utilized by other vendors to develop telematics solutions. Tracking a vehicle using GPS has now become a traditional application of telematics. However, with technological advancements in data analytics and cloud technology, it is possible to detect every component of the vehicle. Commercial vehicle prognostic systems have wide applications. They are used to observe driving behavior, fleet management and prognostics. The use of better technology and improved transmission design will help in attaining better mileage and fuel efficiency.

This report elaborates the market size, market characteristics, and market growth of the Commercial Vehicle Prognostic System industry, and breaks down according to the type, application, and consumption area of Commercial Vehicle Prognostic System.
