Abstracts

Compressed natural gas (CNG) (methane stored at high pressure) is a fuel which can be used in place of gasoline (petrol), Diesel fuel and propane/LPG. CNG combustion produces fewer undesirable gases than the fuels mentioned above. It is safer than other fuels in the event of a spill, because natural gas is lighter than air and disperses quickly when released. CNG may be found above oil deposits, or may be collected from landfills or wastewater treatment plants where it is known as biogas.

This report elaborates the market size, market characteristics, and market growth of the Composite CNG & LPG Tanks industry, and breaks down according to the type, application, and consumption area of Composite CNG & LPG Tanks. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
