Abstracts

Computer-aided manufacturing (CAM) is the use of software to control machine tools and related ones in the manufacturing of workpieces. This is not the only definition for CAM, but it is the most common; CAM may also refer to the use of a computer to assist in all operations of a manufacturing plant, including planning, management, transportation and storage. Its primary purpose is to create a faster production process and components and tooling with more precise dimensions and material consistency, which in some cases, uses only the required amount of raw material (thus minimizing waste), while simultaneously reducing energy consumption.

This report elaborates the market size, market characteristics, and market growth of the Computer-Aided Manufacturing Software industry, and breaks down according to the type, application, and consumption area of Computer-Aided Manufacturing Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Computer-Aided Manufacturing Software in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
