Abstracts

A conditional access module (CAM) is an electronic device, usually incorporating a slot for a smart card, which equips an Integrated Digital Television or set-top box with the appropriate hardware facility to view conditional access content that has been encrypted using a conditional access system. They are normally used with direct-broadcast satellite (DBS) services, although digital terrestrial pay TV suppliers also use CAMs. PC Card form factor is used as the Common Interface form of Conditional Access Modules for DVB broadcasts.

This report elaborates the market size, market characteristics, and market growth of the Conditional Access Module (CAM) industry, and breaks down according to the type, application, and consumption area of Conditional Access Module (CAM). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
