Abstracts

In software engineering, software configuration management (SCM or S/W CM)[1] is the task of tracking and controlling changes in the software, part of the larger cross-disciplinary field of configuration management.[2] SCM practices include revision control and the establishment of baselines. If something goes wrong, SCM can determine what was changed and who changed it. If a configuration is working well, SCM can determine how to replicate it across many hosts.
This report elaborates the market size, market characteristics, and market growth of the Configuration Management Software industry, and breaks down according to the type, application, and consumption area of Configuration Management Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Configuration Management Software in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
