Abstracts

Construction cost estimating software is computer software designed for contractors to estimate construction costs for a specific project. A cost estimator will typically use estimating software to estimate their bid price for a project, which will ultimately become part of a resulting construction contract. Some architects, engineers, construction managers, and others may also use cost estimating software to prepare cost estimates for purposes other than bidding.

This report elaborates the market size, market characteristics, and market growth of the Construction Estimating Software industry, and breaks down according to the type, application, and consumption area of Construction Estimating Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Construction Estimating Software in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
