Abstracts

Lubricant is a substance which is used to control (more often to reduce) friction and wear of the surfaces in a contact of the bodies in relative motion. Depending on its nature, lubricants are also used to eliminate heat and wear debris, supply additives into the contact, transmit power, protect, seal. A lubricant can be in liquid (oil, water, etc.), solid (graphite, graphene, molybdenum disulfide), gaseous (air) or even semisolid (grease) forms. Most of the lubricants contain additives (5-30%) to improve their performance. Construction Lubricants are lubricants used in the construction sector, such as in a variety of construction equipment.

This report elaborates the market size, market characteristics, and market growth of the Construction Lubricants industry, and breaks down according to the type, application, and consumption area of Construction Lubricants. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Construction Lubricants in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
