Abstracts

Contact image sensors (CIS) are image sensors used in flatbed scanners almost in direct contact with the object to be scanned. Charge-coupled devices (CCDs), often used for this application, use mirrors to bounce light to a stationary sensor. CISs are much smaller than CCDs, use typically a tenth as much power, and are particularly suitable for low power and portable applications, often powered over USB.

This report elaborates the market size, market characteristics, and market growth of the Contact Image Sensor industry, and breaks down according to the type, application, and consumption area of Contact Image Sensor. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Contact Image Sensor in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
