## **Abstracts**

A Slip Ring is an electromechanical device that allows the transmission of power and electrical signals from a stationary to a rotating structure. Also called a rotary electrical joint, collector or electric swivel, a Slip Ring can be used in any electromechanical system that requires unrestrained, intermittent or continuous rotation while transmitting power and / or data. It can improve mechanical performance, simplify system operation and eliminate damage-prone wires dangling from movable joints.

Contactless sliprings based on inductive power transfer (IPT) are a preferable alternative to mechanical sliding contacts for power transfer in rotary applications.

This report elaborates the market size, market characteristics, and market growth of the Contactless Inductive Slip Ring industry, and breaks down according to the type, application, and consumption area of Contactless Inductive Slip Ring. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Contactless Inductive Slip Ring in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
