Abstracts

A coreless DC motor is a motor similar to a conventional brushed DC motor. In a coreless motor, there is no soft iron core wound around a coil on a normal DC motor. It significantly improves acceleration and deceleration because the core in the rotor typically has 90% rotor inertia. By removing this core, acceleration and deceleration can be increased by an order of magnitude.

This report elaborates the market size, market characteristics, and market growth of the Coreless DC Motors industry, and breaks down according to the type, application, and consumption area of Coreless DC Motors. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Coreless DC Motors in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
