## Abstracts

A coronary stent is a tube-shaped device placed in the coronary arteries that supply blood to the heart, to keep the arteries open in the treatment of coronary heart disease. It is used in a procedure called percutaneous coronary intervention (PCI). Stents reduce chest pain and have been shown to improve survivability in the event of an acute myocardial infarction.

This report elaborates the market size, market characteristics, and market growth of the Coronary Stent industry, and breaks down according to the type, application, and consumption area of Coronary Stent. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Coronary Stent in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
