Abstracts

Cow cheese is a dairy product derived from milk that is produced in a wide range of flavors, textures, and forms by coagulation of the milk protein casein. It comprises proteins and fat from milk, usually the milk of cows, buffalo, goats, or sheep. During production, the milk is usually acidified, and adding the enzyme rennet causes coagulation. The solids are separated and pressed into final form. Some cheeses have molds on the rind, the outer layer, or throughout. Most cheeses melt at cooking temperature.
This report elaborates the market size, market characteristics, and market growth of the Cow Cheese industry, and breaks down according to the type, application, and consumption area of Cow Cheese. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
