Abstracts

The crankshaft is a component of a reciprocating piston engine that converts the kinetic energy of the linear reciprocating motion of the piston into rotational kinetic energy. The crankshaft is mainly composed of a long shaft that can rotate. In order to convert the reciprocating motion into a rotary motion, there will be a "crank arm" or a crank pin portion on the crankshaft, and the axial center of the crankshaft and the crankshaft have radial displacement. The larger end of the piston rod is connected to the crank arm or crank pin of the crankshaft.

This report elaborates the market size, market characteristics, and market growth of the Crankshaft industry, and breaks down according to the type, application, and consumption area of Crankshaft. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Crankshaft in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
