Abstracts

Cryogenic equipment is used to produce, maintain or operate at very low temperatures. The generally accepted distinction between refrigeration and low temperature is minus 180 degrees Celsius. Typical equipment for cryogenic applications includes vessels, pressure vessels, cold traps, purifiers and piping. In many cases, the device maintains or assists in transporting supercooled liquids such as liquid helium, nitrogen, oxygen and argon. For example, the transfer line provides a safe way to transfer liquid refrigerant from one location to another without jeopardizing workers or machines.

This report elaborates the market size, market characteristics, and market growth of the Cryogenic Equipment industry, and breaks down according to the type, application, and consumption area of Cryogenic Equipment. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Cryogenic Equipment in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
