## **Abstracts**

CVD is a widely used material processing technology. The technology for CVD of pure diamond coatings on rotating cutting tools has developed rapidly in the past several years. In recent times, several advanced composite materials, for example, carbon fiber reinforced plastics (CFRP) parts that are gaining popularity are perfectly suited to be machined with CVD diamond tooling. This has spurred the growth of the CVD diamond coating technology.

PVD or Physical Vapor Deposition, is a process which vaporizes a number of metals, and then binds it on a surface, in layers, in a heated vacuum.

This report elaborates the market size, market characteristics, and market growth of the CVD and PVD Coating Diamond industry, and breaks down according to the type, application, and consumption area of CVD and PVD Coating Diamond. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for CVD and PVD Coating Diamond in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
