Abstracts

A separator is a centrifugal device that separates milk into cream and skimmed milk. Separation was commonly performed on farms in the past. Most farmers milked a few cows, usually by hand, and separated milk. Some of the skimmed milk was consumed while the rest was used to feed calves and pigs. Enough cream was saved to make butter, and the excess was sold.

This report elaborates the market size, market characteristics, and market growth of the Dairy Separator industry, and breaks down according to the type, application, and consumption area of Dairy Separator. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Dairy Separator in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
