Abstracts

A blade server is a stripped-down server computer with a modular design optimized to minimize the use of physical space and energy. Blade servers have many components removed to save space, minimize power consumption and other considerations, while still having all the functional components to be considered a computer. Unlike a rack-mount server, a blade server needs a blade enclosure, which can hold multiple blade servers, providing services such as power, cooling, networking, various interconnects and management. Together, blades and the blade enclosure, form a blade system. Different blade providers have differing principles regarding what to include in the blade itself, and in the blade system as a whole.
This report elaborates the market size, market characteristics, and market growth of the Data Center Blade Server industry, and breaks down according to the type, application, and consumption area of Data Center Blade Server. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Data Center Blade Server in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
