Abstracts

Data Centers refers to virtual or physical infrastructures that are used by enterprises to store a large amount of mission-critical data. The data centers assist in storage, retrieval, and processing of this data. These data centers require multiple backs up supply units, networking connections, and cooling systems for running the enterprise's core applications. The data centers include a number of elements such as electrical switches, power distribution units, uninterruptible power supplies, ventilation, and provisions for network connectivity. Modern data centers make use of management and monitoring software that allows the IT administrators to oversee the equipment and monitor the facilities remotely.
This report elaborates the market size, market characteristics, and market growth of the Data Centre industry, and breaks down according to the type, application, and consumption area of Data Centre. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Data Centre in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
