Abstracts

Data center virtualization is basically a process of designing, developing and deploying a data center on virtualization and cloud computing technologies. Data center virtualization is a flexible, elastic and cost effective alternative to physical data center operations. Data center virtualization can be achieved through two methods, namely storage virtualization and server virtualization. It operates on top of virtualization layer. Major reason for adoption of data center virtualization is to reduce the dependency on hardware.

This report elaborates the market size, market characteristics, and market growth of the Data Centre Virtualization industry, and breaks down according to the type, application, and consumption area of Data Centre Virtualization. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
