Abstracts

Data destruction is the process of destroying data stored on tape, hard drives and other forms of electronic media, so it is completely unreadable and cannot be accessed or used for unauthorized purposes.

Once the data is deleted, the operating system or the application that created it will no longer be able to access it. However, deleting a file is not enough; you must use data destruction software to overwrite the available space/block with random data until you think it is unrecoverable.

This report elaborates the market size, market characteristics, and market growth of the Data Destruction Service industry, and breaks down according to the type, application, and consumption area of Data Destruction Service. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Data Destruction Service in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
