Data integration is the process of combining data from various sources into an application to provide unified and organized view of the data to the users. Today in business enterprises there is a constant necessity for data storage and processing, fueled by continuous increase in the use of computers and smartphones. This data can arise from enterprise's operations, people, technology, and procedures. Data Integration Tool/Software is all about providing an automated, acrobatic and proven solution that lets an enterprise combine and transfer data swiftly. Usually Data integration involves accessing data from all sources, whether those are on premises or in the cloud or both.
