Abstracts

A DC motor is any of a class of rotary electrical machines that converts direct current electrical energy into mechanical energy. The most common types rely on the forces produced by magnetic fields. Nearly all types of DC motors have some internal mechanism, either electromechanical or electronic, to periodically change the direction of current flow in part of the motor.

This report elaborates the market size, market characteristics, and market growth of the Dc Motors industry, and breaks down according to the type, application, and consumption area of Dc Motors. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Dc Motors in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
