Abstracts

A decision support system (DSS) is an information system that supports business or organizational decision-making activities. DSSs serve the management, operations and planning levels of an organization (usually mid and higher management) and help people make decisions about problems that may be rapidly changing and not easily specified in advance—i.e. unstructured and semi-structured decision problems. Decision support systems can be either fully computerized or human-powered, or a combination of both.

This report elaborates the market size, market characteristics, and market growth of the Decision Support Software industry, and breaks down according to the type, application, and consumption area of Decision Support Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Decision Support Software in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
