Abstracts

Stereoencephalography (SEEG) is the practice of recording electroencephalographic signals via depth electrodes (electrodes surgically implanted into the brain tissue). It may be used in patients with epilepsy not responding to medical treatment, and who are potential candidates to receive brain surgery in order to control seizures. It may also be used in research to collect neural data from specific regions of the brain, such as from the auditory cortex for auditory stimulus reconstruction.

This report elaborates the market size, market characteristics, and market growth of the Depth Electrodes industry, and breaks down according to the type, application, and consumption area of Depth Electrodes. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
