## Abstracts

Bone densitometry, also called dual-energy x-ray absorptiometry, DEXA or DXA, uses a very small dose of ionizing radiation to produce pictures of the inside of the body (usually the lower (or lumbar) spine and hips) to measure bone loss. It is commonly used to diagnose osteoporosis, to assess an individual's risk for developing osteoporotic fractures. DXA is simple, quick and noninvasive. It's also the most commonly used and the most standard method for diagnosing osteoporosis. This report elaborates the market size, market characteristics, and market growth of the DEXA Bone Densitometers industry, and breaks down according to the type, application, and consumption area of DEXA Bone Densitometers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for DEXA Bone Densitometers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
