## **Abstracts**

Diabetic socks are socks designed specifically for diabetics to prevent the possibility of foaming. These socks are designed to control moisture, prevent blisters on the skin surface, and minimize moisture build-up. Basically, their main function is to protect the foot and provide maximum support. Diabetic socks are cushioned with extra padding to prevent foot ulcers. These socks are usually inelastic and seamless. Diabetic socks are an important preventive tool for people with diabetes because they protect the foot from potential damage. Smart socks are the latest development in diabetic socks. Smart socks use fiber optic sensors to monitor pressure, moisture and ankle joints to warn of the potential development of ulcers at nerve injury sites.
