Abstracts

Cellulose Nano Crystals (CNC) is a primary building block of the cell wall of all living plants. CNC has high mechanical strength modulus of 150 GPa and tensile strength of 10 GPA in line with supreme synthetic material. CNC plays a major role in the structure of the cell wall giving plants their extraordinary strength exemplified by the gigantic dimensions of some forest trees such as Sequoia. This role can be adapted into man-made products utilizing CNC as a nano building block for the enhancement of existing materials and for the production of novel eco-friendly materials.
