## Abstracts

DAP is a salt which is soluble in water. DAP is manufactured by a chemical reaction between phosphoric acid and ammonia. It majorly finds utility in the agriculture sector as a fertilizer which temporarily increases the pH level of the soil. However, the soil becomes more acidic at a later stage due to nitrification of ammonium.

This report elaborates the market size, market characteristics, and market growth of the Diammonium Phosphate (DAP) industry, and breaks down according to the type, application, and consumption area of Diammonium Phosphate (DAP). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Diammonium Phosphate (DAP) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
