Abstracts

Diaphragm pump (also known as membrane pump) is a type of positive displacement pump, which reciprocates diaphragm to move fluids, gas, and gas-liquid mixtures. These pumps also use a combination of reciprocating action and either a ball valve or a flapper valve to transfer the liquids. Diaphragm pumps are self-priming and are an ideal choice for transferring viscous fluids. These pumps can transfer liquids who have low, medium, and high viscosities. The key components of diaphragm pumps are air chamber, air distribution system, outer diaphragm plate, inner diaphragm plate, valve ball, valve seat, discharge manifold, liquid chamber, diaphragm, and suction manifold. This report elaborates the market size, market characteristics, and market growth of the Diaphragm Pump industry, and breaks down according to the type, application, and consumption area of Diaphragm Pump. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Diaphragm Pump in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
