Abstracts

Dielectric Elastomers (DEs) belong to the electroactive polymer family and are also called smart materials or soft active materials. The dielectric elastomer deforms under stimulation, which further provides a function. DEs is being developed and commercialized as a sensor and actuator, and is widely used in the fields of touch, soft robots, active Braille displays, adaptive optics, aerospace, medical treatment, power generation, energy acquisition, etc.

This report elaborates the market size, market characteristics, and market growth of the Dielectric Elastomers industry, and breaks down according to the type, application, and consumption area of Dielectric Elastomers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Dielectric Elastomers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
