Abstracts

Common-rail direct fuel injection is a direct fuel injection system for diesel engines.

High pressure injection delivers power and fuel consumption benefits over earlier lower pressure fuel injection, by injecting fuel as a larger number of smaller droplets, giving a much higher ratio of surface area to volume. This provides improved vaporization from the surface of the fuel droplets, and so more efficient combining of atmospheric oxygen with vaporized fuel delivering more complete.

This report elaborates the market size, market characteristics, and market growth of the Diesel Common Rail Injection Systems industry, and breaks down according to the type, application, and consumption area of Diesel Common Rail Injection Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
