Abstracts

Digital calipers are the latest in caliper technology and are considered as an evolution of Vernier calipers. Digital calipers are generally used to measure objects which cannot be measured with a ruler. They are made of stainless steel and contain plastic case for display. Digital calipers are measuring instruments which take differential measurements, and are commonly used for inspection in the manufacturing industry to provide precise measurements of an object. Measurement on digital calipers can be taken in both metric and imperial units, and readings can be switched between millimeters, centimeters, and inches. The reading and measurement is generated electronically and displayed on a digital and high resolution screen as a single value. Calipers are used in various fields, such as, mechanical engineering, inspection, engineering design, metalworking, science, and manufacturing, among others. This report elaborates the market size, market characteristics, and market growth of the Digital Caliper industry, and breaks down according to the type, application, and consumption area of Digital Caliper. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
