Abstracts

Digital forensics or computer forensics deals with the activity of collecting, identifying, extracting, and analyzing evidence from digital devices, such as computers, laptops, hard disks, etc. This type of forensics is used in criminal and civil court cases. Currently, this technology is being highly used in the private sector for their internal investigations. The rise in cyber-criminal activities is expected to have a positive impact on the digital forensics market growth over the forecast period. Cyber-attacks, industrial espionage, information security breaches, identity fraud, financial fraud, and many other illegal activities leave a digital fingerprint which can be used by highly skilled investigators to trace the origin of the attack. The process of collection and extracting is a very delicate process. Highly specialized tools and techniques are used to take the data with a write blocker so as to not tamper with the evidence.

This report elaborates the market size, market characteristics, and market growth of the Digital Forensics industry, and breaks down according to the type, application, and consumption area of Digital Forensics. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Digital Forensics in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
