Abstracts

Digital pathology is helpful in providing accurate & faster detection and diagnosis of chronic diseases. It automatically detects tumor at inflammatory and proliferating stromal cells stage, thereby, curbing cost pertaining to abnormal cell detection. It also reduces cost by omitting requirement of Fluorescence In-situ Hybridization (FISH) tests and impacts laboratory workflow positively. Through this technology, information about a patient is generated in the form of online slides, which can be viewed on a computer monitor anywhere.

This report elaborates the market size, market characteristics, and market growth of the Digital Pathology Systems industry, and breaks down according to the type, application, and consumption area of Digital Pathology Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
