Abstracts

A digital duplicator, also known as a printer-duplicator, is a printing technology designed for high-volume print jobs (20 copies or more). Unlike copiers and laser printers, the Digital Duplicator applies the same method as the stencil duplicators which create images on the paper with ink, by making ink penetrate through the pore created onto the master. However, the Digital Duplicator masters are no longer a cloth-like material covered with wax which is used in the stencil duplicators. With the advance of material technologies, special masters which provide finer penetration of ink have been developed. The ink has also been specially developed for the Digital Duplicator in order to realize high image quality.

This report elaborates the market size, market characteristics, and market growth of the Digital Stencil Duplicator industry, and breaks down according to the type, application, and consumption area of Digital Stencil Duplicator. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Digital Stencil Duplicator in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
