Abstracts

A digital vault by its very nature is going to provide some standard services to ensure that its contents are protected, such as being a long-term repository, highly secured regardless of overall network security and regardless of the physical topology of the network. It must offer an effective way to protect and control critical information, and it allows an organisation to focus its defense resources to a vault at any location. It is easier for an organisation to defend one point effectively than to try and defend a complete network.

This report elaborates the market size, market characteristics, and market growth of the Digital Vault industry, and breaks down according to the type, application, and consumption area of Digital Vault. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Digital Vault in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
