Abstracts

Diphenylamine (DPA) is a crystalline pleasant smelling organic compound with a chemical formula $(C_6H_5)_2NH$. DPA dissolves in many common organic solvents, and is moderately soluble in water. Diphenylamine is primarily used as a parent compound for the vulcanization accelerators and for antioxidants or antiozonant in end use industry such as plastics and rubber. DPA as well as their derivatives are added to rubber products to slowdown the degradation process by oxidants and ozone. DPA find wide application scope as antioxidants, fungicide, chemical intermediate, and others in various end use industries such as agriculture, automotive, cosmetics & personal care, plastic & rubber among others. They are widely utilized as a chemical intermediate and antioxidants in the manufacturing of dyes, pH indicators, fibers, polymers, lubricants, and curing agents.

This report elaborates the market size, market characteristics, and market growth of the Diphenylamine industry, and breaks down according to the type, application, and consumption area of Diphenylamine. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
