Abstracts

Directional drilling (or slant drilling) is the practice of drilling non-vertical wells. It can be broken down into four main groups: oilfield directional drilling, utility installation directional drilling (horizontal directional drilling), directional boring, and surface in seam (SIS), which horizontally intersects a vertical well target to extract coal bed methane. This report elaborates the market size, market characteristics, and market growth of the Directional Drilling industry, and breaks down according to the type, application, and consumption area of Directional Drilling. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Directional Drilling in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
