## Abstracts

A disc harrow is a farm implement that is used to till the soil where crops are to be planted. It is also used to chop up unwanted weeds or crop remainders. It consists of many carbon steel and sometimes the longer-lasting boron discs, which have many varying concavities and disc blade sizes and spacing (the choices of the latter being determined by the final result required in a given soil type) and which are arranged into two sections ('offset disc harrow') or four sections ('tandem disc harrow').

This report elaborates the market size, market characteristics, and market growth of the Disc Harrows industry, and breaks down according to the type, application, and consumption area of Disc Harrows. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Disc Harrows in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
