Abstracts

Distributed data grids are data storage software. They represent a sub-segment of in-memory computing. Data grids store data in the RAMs of a set of multiple servers distributed across various locations, which can be managed centrally. Distributed data grids are versatile as they can store both structured as well as unstructured data. Distributed data grids have several advantages over traditional forms of data storage as the software avoids traditional input/output bottlenecks encountered in relational database structures by using object-oriented designs.

This report elaborates the market size, market characteristics, and market growth of the Distributed Data Grid Software industry, and breaks down according to the type, application, and consumption area of Distributed Data Grid Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Distributed Data Grid Software in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
