Abstracts

Distributed wind is defined by the wind project's location relative to end-use and power distribution infrastructure, rather than turbine or project size. Distributed wind includes the following:

wind energy systems, either off-grid¹ or grid-connected, at homes, farms and ranches, businesses, public and industrial facilities, or other sites to offset all or a portion of the local

energy consumption at or near those locations.

systems connected directly to the local grid² to support grid operations and local loads.

This report elaborates the market size, market characteristics, and market growth of the Distributed Wind industry, and breaks down according to the type, application, and consumption area of Distributed Wind. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Distributed Wind in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
